

Requirement Analysis Phase – EduGenie

1. Purpose of Requirement Analysis

The requirement analysis phase identifies the needs, expectations, and technical requirements of EduGenie before development begins.

It helps define what the system should do and how it should support students.

2. Functional Requirements

- Students should be able to ask questions through the AI assistant.
- EduGenie should provide relevant and understandable answers.
- The system should explain difficult concepts in simple language.
- Students should be able to generate summaries and study notes.
- The system should generate quizzes and practice questions.
- The application should support interactive conversations with the AI.

3. Non-Functional Requirements

- The application should be easy to use.
- Responses should be generated within a reasonable time.
- User data should be handled securely.
- The system should be reliable and available when required.
- The interface should be responsive and accessible on common devices.

4. User Requirements

- Students need quick clarification of academic doubts.
- Students need simple explanations of complex topics.
- Students need useful study materials and practice questions.
- Students should be able to interact with the system easily.

5. Technical Requirements

- Google Gemini AI for AI-powered responses.
- A web-based user interface for student interaction.
- Backend services to process user requests.
- Database or suitable storage where required.
- Internet connectivity for AI-powered features.

6. Expected Outcome

The requirement analysis phase provides a clear specification for developing EduGenie as an interactive, user-friendly, and AI-powered learning assistant for students.
